ADVANCED INHALATION REVOLUTIONS takes aromatherapy to a new level with the Vapir, a portable state-of-the-art digital system that heats plant material at low temperatures and releases the plant's essential active elements within seconds, without burning the substance or creating toxic and carcinogenic byproducts.

The Vapir is easy to operate. Just fill the empty disk, insert the disk into the unit and set the desired time and temperature. Available in both a corded and cordless model and in an array of colors. The unit comes with a world adapter, protective case, two reusable e® herb disks and a handy backpack. The Vapir also converts into an aromatic diffuser that works well with oils, resins, liquids and powders.
